FILED: MAY 16, 2005
FOR: SUPPORT FRAME FOR RELIEVING THE VERTEBRAL
COLUMN

INFORMATION DISCLOSURE STATEMENT

MAIL STOP AMENDMENT

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Dear Sir:

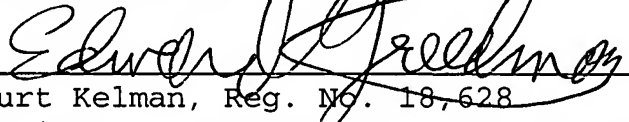

Applicants are enclosing Form PTO-1449 listing the references cited in the International Search Report. US 3,889,64 and US 2,835,247 were also discussed in the specification (see second Preliminary Amendment).

No support frame that contains length-adjustable support rods that run parallel to the vertebral column - for adapting the support frame to the individual body dimensions of the patient, on the one hand, and no interchangeable reinforcement rods having a different thickness, a different stiffness, and/or a different length - for step-by-step weaning of the patient from the orthosis, on the other hand, can be found in the German patent 89 07 580. It discloses a device for supporting the human body when lifting loads, but not a support frame that is permanently

worn by patients suffering from problems with the vertebral column. It is not a support frame composed of a hip clasp and a thoracic vertebrae clasp, but rather a device consisting of a hip belt and a chest belt, both of which completely surround the upper body of the wearer and do not merely cover the back region, as the clasps according to the present invention do.

Furthermore, the belts also differ from the clasps according to the present invention, which are generally made of plastic or aluminum, with regard to their flexibility. Therefore, it is obvious that this is not a support frame. In addition, the hip belt of the prior art rests on the body **below the pelvic ridge** (page 6, lines 4-5) so that this device obviously does not have the back support function of the present invention.

Respectfully submitted,
Claudia ZOURS ET AL
